SUMMARY

Computer Engineering student and full-stack developer building practical web, mobile and backend systems with Java/Spring Boot, Node.js, React and Flutter. Experienced in REST APIs, PostgreSQL/MySQL, authentication, role-based systems and AI-enabled application features. Also experienced in embedded-system prototyping, including real-time power monitoring. Interested in remote software engineering, freelancing and product development.

TECHNICAL SKILLS

Languages	Java, JavaScript, TypeScript, Dart, SQL, C/C++
Frontend & Mobile	React.js, Flutter, responsive UI, Android development
Backend	Spring Boot, Node.js, Express, REST APIs, authentication, role-based access
Data & Cloud	PostgreSQL, MySQL, Neon, Firebase, Docker, Git/GitHub, Postman
Engineering	OOP, Clean Architecture, Agile, CI/CD, API integration, embedded systems

EXPERIENCE

Software Developer / Student Project Developer 2024 – Present
Bahir Dar University / Independent Projects

- Developed end-to-end academic and product projects across web, mobile, backend and embedded systems.
- Built secure REST APIs, database-backed applications, authentication flows and role-based features using Java/Spring Boot and Node.js.
- Integrated Flutter and React clients with backend services and third-party APIs; used Git/GitHub for source control.

Embedded Systems Developer Dec 2024 – Oct 2025
BiTec Maker Space, Bahir Dar University

- Contributed to HAKI, a real-time power monitoring device using voltage, current, temperature and humidity sensors.
- Worked across sensor integration, microcontroller development, display/logging and physical prototyping.
- Participated in advancing the prototype from breadboard development toward PCB and mechanical fabrication.

Technical Internship / Project Work 2026
Amhara Media Corporation (AMECO)

- Worked on the AMECO Media Management System, covering newsroom roles, content workflow and scheduled news programs.
- Used Node.js for backend development and designed the system around practical media-house workflows.

EDUCATION

BSc Computer Engineering 2023 – 2027 (Expected)
Bahir Dar Institute of Technology (BiT), Bahir Dar University

SELECTED PROJECTS

StratIQ — Multiple Trading Accounts *Flutter, Node.js, Express, PostgreSQL/Neon*

- Trading journal platform with authentication, trade management, psychology, screenshots, analytics and AI-assisted trade review.
- Designed a multi-account architecture with account-level ownership, account limits and trade-to-account relationships.

CivicFix — Civic Issue Reporting Platform *Spring Boot, React, Flutter, JWT, Google Maps*

- Built a citizen reporting workflow for submitting issues with descriptions, categories, images and geolocation.
- Implemented citizen mobile features including authentication, My Reports, nearby issues and profile/logout.

BDU Document Request System *Java, Spring Boot, React, MySQL*

- Designed a university document-request workflow connecting students, college registrars and administrators.
- Covered document-specific requests, registrar assignment, approval workflow and payment-request messaging.

HAKI — Real-Time Power Monitor *Embedded systems, sensors, Arduino-class prototyping*

- Prototype for monitoring electrical measurements and environmental conditions with local display and data logging.

CERTIFICATIONS & TRAINING

- I-TEAMS Certification
- EDI Training Certification

LANGUAGES

English (professional) · **Amharic** (native)

ADDITIONAL

- BiTec Maker Space — embedded systems / HAKI project
- Hult Prize-inspired entrepreneurship and innovation activities
- Remote work / freelancing focus; product development with Flutter and full-stack technologies
